

## **Baltimore Aircoil Company acquires Eurocoil SPA; Strengthens its position in the global cooling market**

Baltimore Aircoil Company (BAC), a leader in cooling solutions worldwide for the commercial, industrial, and refrigeration markets, announced today the acquisition of Italian based Eurocoil SPA. They are a leading manufacturer of heat exchangers serving the European commercial and refrigeration industries.

The addition of Eurocoil increases Baltimore Aircoil Company's manufacturing capacity in the region, while adding additional heat exchanger capabilities used for BAC's existing evaporative hybrid and adiabatic cooling products. BAC has been the pioneer in this product category since the first release of the TrilliumSeries™ Adiabatic Products in Europe in 2005.

Don Fetzer, President of Baltimore Aircoil Company states, "We're excited to welcome Eurocoil to the Baltimore Aircoil Company family. The acquisition of Eurocoil and our previous investment in Coil Design Corp. in North America, positions BAC to accelerate the development of industry-leading evaporative hybrid and adiabatic technologies, furthering our vision to reinvent cooling to sustain the world."

"Eurocoil is an excellent organization composed of quality people and industry experts. They have a history of providing exceptional products and services to their customers, which matches extremely well to the BAC strengths and culture," says David Jacobs, Vice President and Managing Director for the EMEIA region. "We welcome all of the Eurocoil employees to The Baltimore Aircoil Company and are excited to be working with them on a successful future together."
